The “weighted average days to pay suppliers” is understood as the amount of time that elapses between the delivery of the goods or services and the payment date.

The “weighted average days to pay suppliers” is calculated as a quotient in which the numerator is the ratio of paid transactions to the total amount of the payments made plus the ratio of transactions pending payment to the total amount of pending payments and the denominator is the sum of the total payments made and the total payments pending.

The ratio of paid transactions is calculated as a quotient where the numerator is the sum of the products corresponding to the amounts paid times the number of days to pay (calendar days elapsed from the initial date to the actual payment date) and the denominator is the total amount of the payments made.

The ratio of pending transactions is calculated as a quotient where the numerator is the sum of the products corresponding to the amounts paid times the number of days during which the payment is pending (calendar days elapsed from the initial date to the closing date of the annual accounts) and the denominator is the total amount of pending payments.
